Restb.ai

The data behind listing images will help your members in ways they never imagined.

The powerful computer vision and AI solutions from Restb.ai helps multiple listing organizations & their members automate time-consuming manual processes, improve data completeness, & enhance the way people interact with properties.
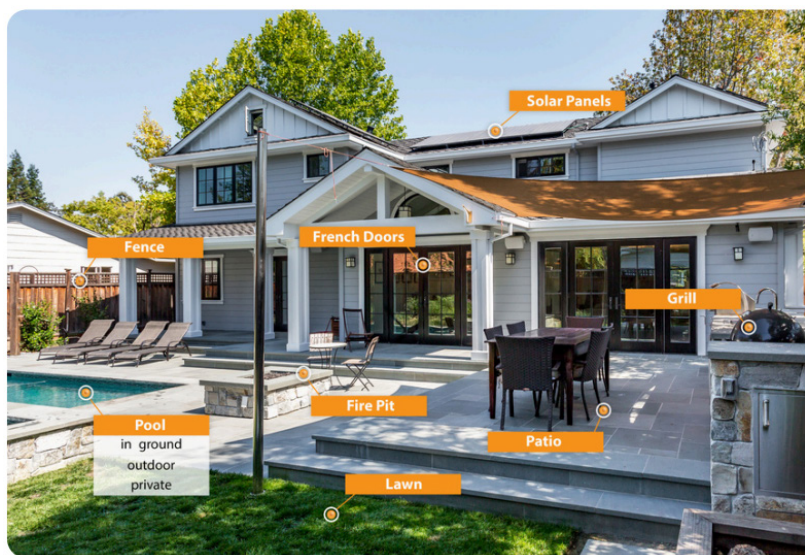

Auto populate listings

Populating listings to their fullest is a critical component of providing the most complete & accurate property dataset. Basic Photo Type Tagging for Matrix™ automatically identifies the subject matter in property photos and applies the appropriate image type label. Fast, accurate tagging of images right as they are uploaded opens up numerous possibilities for enhanced image displays across both agent and consumer experiences.

Advanced photo feature tagging for Matrix

Can instantly identify specific features within a property photo, including interior and exterior features, architectural styles, and more. This exciting feature can be used to automatically generate accurate photo captions and descriptions, create image Alt Text values, and populate a variety of listing input fields that are often left blank.

Control what's being published

Non-compliant images and videos can have a negative impact on user experience and your brand, or even worse, result in costly legal issues. Restb.ai works seamlessly with Listing Data Checker to automatically scan images and videos to ensure they comply with your guidelines.

Ensure website accessibility

The Americans with Disabilities Act (ADA) and the Web Content Accessibility Guidelines (WCAG) both require websites to be equally accessible to everyone. For the visually impaired, this means ensuring every image on your site has a descriptive alt tag to be read by a screen reader. Restb.ai is able to generate SEO-optimized and accessibility compliant captions for property photos in real time.
